I could never have completed this book without a yearlong fellowship from the National Endowment for the Humanities in 2012–13. Together with my university’s sabbatical, this funding enabled me to complete the first draft. This time away also gave me the gift of spending my father’s last month of life with him, as he lay dying in intensive care. He is missed. Praise be to Congress for having the wisdom to continue funding the endowment. The American Philosophical Society awarded me a Benjamin Franklin Grant in 2008, which gave me a month to research the history of physiology at the Wellcome Library of Medicine. Dean Peter Starr and Acting Associate Dean of Research Phil Johnson awarded me a Mellon Grant to pay for the index as well as the cover image, illustrations, and a small subvention. I am very grateful for the support.

Knowledge is deeply collaborative. I am grateful to the staffs at the National Library of Medicine, especially Stephen Greenberg, the Wellcome Library in London (thank you, Lesley Hall), the British Library (with appreciation to Modern Manuscript Lead Curator Sandra Tuppen and her staff), the New York Public Library Pforzheimer Collection, especially its helpful curator, Elizabeth Denlinger, and associate curator, Charles Carter; the American Philosophical Society Library in Philadelphia, which has Ben Franklin’s library, the Library Company of Philadelphia; the Guy’s Hospital Archives at King’s London; the Institute for Engineering and Technology in London; the Joseph Wright of Derby Museum (a shout-out to Matt Edwards); the Royal Institution (with thanks to Frank James and Jane Harrison); Cambridge University Library Rare Book and Manuscript Rooms; and the Library of Congress. The interlibrary loan and circulation staff at American University has been unfailingly kind and efficient. At American, I have had numbers of exceptional students, and I’d like to thank here just a few of them: Aaron Long, a dedicated research assistant for this project; Madison Chapman; Alex Burchfield; Ted Kowalsky; Patrick Keilty; Corie Schweitzer; Victoria Ford Smith; Dan Mangiavellano; Sandra Beasley; Ben Goldstein; Amy Moran Thomas; and
Acknowledgments

Sean Donovan. I thank my colleagues, especially Deborah Payne, April Shelford, Amy Oliver, Ed Comstock, Adam Tamashasky, David Pike, Sarah Marsh, John Hyman, Lily Wong, Keith Leonard, and Marianne Noble. Rebecca Rangel-Mullin kept me sane when I was department chair. My mother has been a mainstay of encouragement.

Romanticists are a generous bunch: for help of various kinds, I thank Stuart Curran, Alan Richardson, Joel Faflak, Marilyn Gaull, Trevor Levere, Neil Fraistat, Terry Kelley, Robert Mitchell, Stefani Engelstein, Nora and Keith Crook, Alan Bewell, Sharon Ruston, Anne Wallace, Tilottama Rajan, Ralf Haekel, and Norbert Lennartz. Stuart and Alan Richardson alone outdo the nine muses put together. Joel makes the profession fun. Patrick O’Malley codirected the North American Society for the Study of Romanticism 2014 conference with me, an act of selflessness: all Romanticists are in his debt. Other scholars who have been unstinting with help include Frank James, Konstatin Pollack, Marshall Alcorn (who attunes me to how much weight my sentences can bear), Charis Anastopoulous, and George Rousseau. For providing venues to present versions of portions of this book, I am grateful to Lilla Crisafulli, who invited me for two lectures in Bologna; Enrichetta Soccio, who asked me to lecture twice at Universita degli Studi G. d’Annunzio in Chieti-Pescara; Giuseppe Albano, who invited me to lecture at the Keats-Shelley House in Rome in the room adjacent to where Keats died; Mark Lussier at Arizona State University, who kindly asked me to give the Ian Fletcher Memorial Lecture at ASU and who arranged for me to speak at the Center for Science and Imagination there; Patrick Keilty made it possible for me to give two lectures at the University of Toronto: one in the English Department, with Alan Bewell’s kind support, and another for the Institute of the History and Philosophy of Science; and Tilottama Rajan invited me to speak at Western University, and I am grateful to Liz Effinger for taking me around. In Bologna, the town for foodies, I was well looked after by Fabio Liberto and well fed by Lilla Crisafulli and Keir Elam. And, in Tempe, Mark Lussier took me to a desert garden teeming with cactus blooms and Chihuly glass. Another paradise found. Adam Komisaruk generously arranged for me to give a weekend seminar titled “Science and Imagination” at the University of West Virginia in 2013, and there I had the pleasure of getting to know Alexandra Cook, Lisa Ann Robertson, Yasmin Solomonescu, Teresa Pershing, Wendy Nielson, and Elizabeth Way, among others. I thank all these audiences for their interest, queries, and suggestions. Matt McAdam at Johns Hopkins University Press has been a patient advocate for this book, and Catherine Goldstead has been most helpful. My anonymous reader for the press made many astute suggestions, and I hope my responses to him or her show how carefully I
tried to take in the advice. Carrie Watterson, my fastidious copy editor, prevented many an error; the ones that remain are mine alone.

My sons, Blake Adam and Griffin Samuel, have been the source of continual joy and pride. There is no greater pleasure than to watch them relish and take part in the world (though, boys, must this include skydiving?). Gravity? To learn about how physicists think about matter, I sat in on a course taught by Nathan Harshman. Our conversations over two years about the wonders of matter eventually led to our joint teaching of a course called Literature and Science and the Two Cultures, and rarely has teaching been such an ode to wonder, not to mention just plain fun. Nate inspires, as he is constantly thinking up multiple ways to reach students and get them not just to understand but also to love difficult concepts. Over the decades, Jonathan Loesberg has generously read more of my prose than any other living being, and I have always learned from his responses, often served up with a glorious glass of Barolo or two. *Nel vino Italiano, la verità.* One day, his knowing precisely what arguments entail and don’t will rub off. Without the love of Arlene Sha, all this would be for naught. She is my anchor, my home, not to mention the best moving buddy anyone could want. Let me speak not of how lopsided my debts to her really are.
