Introduction to the Physics of Gyrotrons

Temkin, Richard, Granatstein, Victor, Nusinovich, Gregory S.

Published by Johns Hopkins University Press

Temkin, Richard, et al.
Introduction to the Physics of Gyrotrons.

Index

absorption, 8, 11, 228; cyclotron, 219; induced, 9, 22
acceleration, 4; accelerating cavity, 275; gradient, 240; phase, 150, 280–1
accelerators: applications, 265, 267; collider (linear), 205, 240, 245; electron ring, 276; heavy ion, 286; high-current, 270
atmospheric window, 240–1
attenuation/attenuators, 133–4, 140, 147–8, 240–1; absorbers, 245
automodulation, 79, 101, 261
autoresonance, 10–12, 271, 284; cyclotron autoresonance maser (CARM), 155, 250, 270–3; effect, 12, 121, 282; integral, 144, 160, 162–4, 302
backward wave, 12, 15, 37, 139, 249, 251, 255, 258–9, 264; excitation, 255; interaction, 14, 80, 137, 139–40, 142; oscillator (BWO), xiii, 36, 139, 257–62, 284
balance equation, 19, 50–1, 60, 62–3, 71–2, 88, 169–70, 173–7, 185, 192
bandwidth: amplification, 134–8, 141, 156–8, 168, 172, 180–2, 241–4, 250–4, 256, 265, 267, 269, 272; instantaneous, 240–1, 244, 255; locking, 111–2, 114–5
beam (electron): annular, 61, 85, 125, 131, 146, 159, 185, 210, 268, 274, 304; axis encircling, 275–7; current density, 143, 164, 167, 170, 174, 177, 200, 267, 286, 304; helical, 23; loading, 174; spiral, 275; trochooidal, 22–3, 250; wave beam (see wave, beam)
Bragg reflector, 272–3; resonance conditions, 221, 253, 273
breakdown (RF), 265
Brewster angle, 228
Brewster window. See window; Brewster
Brillouin angle, 222, 253, 271–2, 282; length, 223, 225
bunching, 155, 167, 174, 178–80, 266–7, 274; axial, 5, 120–1, 271, 278; ballistic, 113, 115, 171, 176–8, 183, 186, 267; M-type, 128, 147–8, 259, 271, 276–9, 282; orbital, 5, 36, 55, 100, 120–1, 167, 271; O-type, 128, 147, 278–9, 282; overbunching, 88, 178; parameter, 113, 171, 177, 186, 188, 198, 199; phase, 5, 57, 134, 148–9, 167, 171, 266, 279; prebunching, 172–3, 177, 198, 265–7; quadratic, 5, 18, 120
Busch’s theorem, 197
capacitance, 51
capacitor, 184
cathode: ceramic, 190; loading, 42; thermionic, 27, 190–1, 199, 200, 204
caustic, 54, 59, 67, 219, 222, 225; radius, 218, 222
cavity (resonator), 30–6; accelerating (see acceleration); coaxial, 68, 218, 235–6, 241, 247; cylindrical, 30, 54, 58, 62, 66, 183, 245, 247, 269; input, 167, 169, 170, 173, 176, 183–6, 198, 202–3, 222, 241, 243, 245; intermediate, 181, 243; open/closed, xiv, 21, 31, 52, 76, 215, 268; output (last), 167–8,
cavity (resonator) (cont.)
174–5, 177, 179, 183, 186, 188, 198, 241, 243, 245–6, 268; penultimate, 168, 245; prebunching, 198
chaotic oscillations. See oscillations, chaotic
charge conservation law, 60, 305
Cherenkov: radiation, xiii;
synchronism (resonance), 13, 37, 274
coil: gun, 197, 211; trim (correcting), 252, 273
collector, xiv; 23–4, 220, 286;
depressed, xiv, 230–2, 234;
single/multi-stage, 231, 233, 236–7
collider. See accelerators, collider
communication systems, 189, 205, 230, 250
compression: adiabatic, xiv, 21, 215, 231–2; magnetic, 26, 42–3, 190, 197–9, 202, 210
conductivity, 50, 58; thermal, 228–30
conversion (mode, wave), 220, 226, 229
converter (mode), quasi-optical, 220–7, 233
cooling, 168, 228, 286; edge, 228–9;
face, 229
corrector, phase, 227
correlation, 194; cross-correlation function, 194–6; delta-correlation, 201; function, 193–6, 200–201, 204–5
corrugations (grooves), 220–1, 253–4, 272
coupler (input/output), 30, 255
coupling: beam (impedance), 62, 66–8, 146, 162, 165–6, 185, 197, 210–1, 218, 256, 276, 279, 284–5;
critical, 185; mode, 96; wave, 221, 253
crestatron (regime), 131
cross-talks, 142
cryostat, 39–41
cyclotron radiation. See radiation, coherent cyclotron
cyclotron resonance, 5, 128, 139, 271–2, 284; autoresonance maser
decelerating phase, 150, 271, 280
deceleration (electron), 4, 11, 15–7, 19, 231, 266
degeneracy, 66–7, 103, 142
delay time, 194, 260
diamond (chemical vapor deposition), 229–30
dielectric: loading, 138; loss tangent, 227–30; medium, 51, 184; permittivity, 227–30; shielding, 203; tensor, 119
diffraction: losses (see losses, diffractive); output, 215; Q-factor (see quality factor, diffractive)
dispersion: curve, 139, 142, 254, 257, 264; diagram, 14, 123, 137–42, 254, 257, 264; equation, 14, 120–1, 124, 128–34, 139–40, 146, 148–9, 160, 165, 258, 284
distribution function, 119–20, 200; electron, 190, 199
Doppler: anomalous effect, 13–5, 17, 123, 273–4, 276; broadening (spread), 22–3, 81, 250, 272; normal effect, 13–5, 17; shift (frequency), 11, 17, 189, 272, 280; term, 11, 123, 164
Dopplertron, 272

drift section (region, space), 5, 85, 110-3, 133-4, 142, 159, 167, 171-4, 177-8, 186, 198, 206, 245, 247, 267
driver, 110, 170, 183, 185, 199, 240, 256; power, 112
duty cycle, 244

efficiency: collector, 231; interaction (electronic), 49, 55-7, 83, 87-8, 103-4, 145, 151, 155, 167-8, 172, 183, 185, 230-1, 259-60, 266-70, 272-4, 281; linearized, 50, 63-5, 68-9, 71, 93; normalized, 57; orbital (perpendicular), 55, 62-3, 72-6, 88, 113-5, 145, 148, 152, 155-6, 169, 171, 174-6, 178-9, 183, 186-8, 201, 260, 266; output, 87-8, 217; overall (wall-plug), 230-1; single-particle, 7, 17-20, 55
electron: bunch, 5, 85-6, 149-50, 259, 267, 271; flow (laminar/quasi-laminar, nonlaminar), 27-8; layer, ring, 275-6, 280; number of orbits, 7, 17, 274, 279; optics/optical system, 272-3; orbit, 4, 17, 164, 271, 274-5, 280-2
emission, 9, 190, 199, 201; secondary, 229; space charge, limited (see space charge); temperature limited, 108, 199-200, 203-4
emitter, 25-6, 42-3, 190, 200
energy: conservation law, 143, 147-8; levels (Landau), 8-9; equidistant/nonequidistant, 10; microwave (see microwave); spectrum, 8
equilibrium state, 96, 117-8
excitation: hard, 74-6, 96, 100, 103, 108, 116, 139; waveguides (wave excitation), 143, 148, 221, 257, 273, 295-9; zone, 93
feedback, loop, 140-1, 258-60, 263
fluctuations, 189-211 passim;
amplitude, 194; frequency, 194
forward wave, interaction, 14, 122, 137, 141, 249, 258-9
free-electron laser (FEL), 7, 12, 57, 102, 106, 122, 272
frequency: carrier, 56, 77, 90, 180, 200, 205; cold-cavity (eigenfrequency), 58, 60, 62, 180-1, 184, 192, 198, 202; continuous/step-tunability, 110, 233, 263-5, 268; cutoff, 14, 52, 77, 81, 90, 137, 142, 162, 166, 168, 253, 257, 264-5, 285; cyclotron (gyrofrequency, electron cyclotron), 3, 11, 17, 56, 100, 106, 121, 126, 151, 162, 166, 197, 206, 219, 265, 272, 279, 285; detuning (signal frequency), 113, 158, 169, 175-81, 184, 185, 198, 284; multiplication (doubling), 115, 134, 157-8, 160, 177, 245-6, 248, 267; plasma (beam plasma), 86, 120, 122-4, 142; pulling, 60, 111, 115, 185, 285; signal, 111, 115, 151-2, 157, 159, 167, 180-2, 189, 198; up/down-shift (see Doppler)
Fresnel parameter, 34, 68, 77
fusion, controlled (reactors, tokamaks, and stellarators; Doublet-IIID, International Thermonuclear Experimental Reactor, ITER, JT-60U, TCV, Tore Supra, Wendelstein 7-X), 215, 219, 232-4, 248
gain, 132-4, 156-8, 167-8, 172, 175-6, 179-185, 202, 241, 245, 248, 250-2, 255-6, 265; electronic, 249; function, 62, 96, 169; large-signal (saturated), 181-2,
gain (cont.)
185, 242–3, 246, 253–6, 267;
small-signal, 132, 136, 157, 267
159, 180, 181, 243, 246, 252–3,
181–2, 251
gain-bandwidth product, 135, 176,
159, 180, 181, 243, 246, 252–3,
252–3, 257
geometrical optics, 222, 227
Graff theorem, 294
grazing, condition, 136–42, 158, 251,
256
growth rate, 133, 136, 141–2
guiding center, 3, 25–6, 42, 51–7, 61,
131, 158, 274–5, 281, 290; drift 53–4, 69,
277–8; radius (see radius, guiding
center)
gun, electron, 140, 197, 199–200,
210, 236, 258, 272; adiabatic
theory of magnetron-type, 25–7,
106, 197, 209; double-anode
(triode-type), 23, 106, 197, 206;
inverted, 236; magnetron-type, xiii,
22, 25–30, 215, 267–8;
single-anode (diode-type), 23, 204,
206, 209–10; synthesis, 29
gyroamplifiers, 56
gyro-backward-wave oscillator
(gyro-BWO), 36–7, 137, 257–65,
284
gyrokystrons, 3–7, 85–6, 113, 133,
167–88, 191, 197, 200, 200–3,
205–7, 222, 239–48, 250, 265, 267;
relativistic, 206, 240
gyrotron (gyrotron oscillator),
36, 47, 52, 72, 99, 145, 168, 176,
191, 198, 200, 215, 239–40, 250,
253, 260; large-orbit (L.O.G), 274–7,
279, 284–5; small-orbit, 275–6
gyropeniotron. See peniotron
gyroradius, Larmor. See radius,
gyroradius, Larmor
gyro-traveling-wave tube (gyro-TWT),
36–7, 119–66 passim, 191, 200,
205, 207–8, 244, 249–56, 258, 265,
271–2, 284, 300–307;
frequency-multiplying
(frequency-doubling), 159–60,
208; multistage (two-stage), 133–7,
142, 157, 208, 252, 255, 267;
severed, 255; tapered, 137, 251,
252
gyrotron manufacturers, 229, 234–8,
240, 250
gyrotwystron, 37, 244, 265–8;
inverted, 101, 209, 267
Hamiltonian, 53–4, 69, 146, 293
heater, 204
heating, 168; capacity, 228; collector,
220, 228; dissipation, 230; ohmic,
88; window, 228–9
helium, 39–41, 246
Helmholtz equation, 20, 77, 289,
293, 297
insertion losses. See losses, insertion
instability: absolute, 122–3, 142, 252,
255; automodulation or sideband,
102, 260; convective, 122–3, 130;
cyclotron maser, xiv, 131, 274, 276;
electrostatic cyclotron, 202;
magnetoactive plasma, 119;
negative mass, 5, 85, 123;
overbunch, 102; phase, 103;
Weibel, 121, 131
instant turn-on, 93, 106, 116
interaction: four-photon, 102;
three-photon, 103
ions, 199, 219; multicharge, 286
kicker, 273
klystron (linear-beam klystron), xiii,
37, 98, 110, 167, 171–2, 177–9,
201, 206–7, 245, 256
Laplace equation, 20
large-signal regime, 172, 174, 182,
208, 241, 251, 258; gain (see gain,
large-signal)
lasers, 31, 96, 268–9, 286
Lorentz force, 50, 52–3, 70, 125–9,
143, 163, 168, 278, 289–92,
300–301
Lorentzian shape, 202
losses, 168, 228, 253; diffractive, 23, 35, 87, 168, 183, 245, 256, 273;
distributed, 255; insertion, 132–3;
materials, 13, 142, 147, 167, 255–6; microwave, 184; ohmic
(circuit), 42, 58, 87, 89–90, 168,
216, 218–9, 233, 253, 255, 269
magnetic current (surface), 221
magnetic cusp, 275
magnet screen, 273
magnetron, xiii, 276–7
magnets, 37–40; cryomagnets, 39, 40
magnicon, 245
maser, 268
Maxwell equations, 58–9, 160,
295–8
medium: active, 8; isotropic, 121;
nonisotropic, 119
membrane function, 53, 61, 66, 162,
289–99
microwave: circuit, structure, 142,
190, 199, 215, 269, 272, 276, 282,
286; diagnostics, 189; magnetron-
type (slotted, vane), 276–7, 282;
photonic-band gap (PBG), 269–70;
sintering, 286; slow-wave, xiii, 14,
124, 257, 274; smooth-wall, 276
mirror. See reflector
mirroring (electron reflection), 26,
82, 107, 199
mode: caustic (see caustic);
interaction, 92–118; jumping
(hopping), 102, 103; phase-
amplitude interaction, 101;
selection (see selection, mode);
suppression (see suppression)
momentum: canonical angular, 275;
electron axial, 12, 48, 52, 143–4,
160, 162, 164–5, 168–9, 231, 273;
electron orbital (transverse), xiv, 5,
18, 22, 48, 52, 144–5, 184, 231,
273, 284–5
multipactor, discharge, 229
multipole, 6, 19, 100, 276; dipole,
100, quadrupole, 100
nitrogen (liquid), 40, 229
noise, 189–211; amplitude, 191;
extrinsic (technical), 189–90,
204–5; flicker (Johnson), 190,
199–200; frequency, 195, 201,
204–5; intrinsic, 189–90, 199–204;
power, 202–3; shot, 190, 199–204;
temperature, 202–3; thermal
agitation, 190, 199; velocity, 190,
199; white, 202
oscillations: chaotic, 79–80, 103, 261;
free-running, 113–5; parasitic,
142; phase-locked (see phase,
locking)
oscillator, 3, 191, 193, 261; free-
running, 191–2, 196, 204, 206;
phase-locked, 24
passband, 121
peniotron, 277–84; autoresonance,
282–4; gyropeniotron, 277, 282–3
phase: deviation, 205–6; locking,
101, 110–6, 198; portrait, 96, 118;
sensitivity (see pushing factor);
slippage (phase shift, dynamic/
kinematic), 5, 12, 17, 76, 81, 100,
177; space, 154–5, 201, 231
Pierce, gain parameter, 122, 129–31,
136, 140, 149, 284
plasma, 189; confinement, 219;
diagnostics, 233, 269, 286; heating,
219, 248; electron cyclotron
resonance heating (ECRH) and
current drive (CD), xiv, 219, 229,
232–3, 269; magnetoactive,
119–20; waves (see wave)
point-gap model, 98, 167–88, 206
Poisson equation, 28–9
potential: depression, 231; Hertz,
52–3, 169, 289, 297–8; vector,
47–8, 163; well, 151, 199
power, microwave, xiv, 19, 83, 132,
147, 167–8, 190, 202, 228, 260;
average, 167, 244–5, 256; balance
equation (see balance equation);
continuous wave (CW), 215–6;
power, microwave (cont.)

input (drive, signal, amplitude), 132, 157–9, 162, 178–9, 183, 185, 202, 249; output (radiation), 88–90, 157–9, 219, 241–4, 247–9, 253, 256, 267, 269–70; peak, 216, 219, 250–2, 254, 256, 267

pushing factor (phase, magnetic field, voltage), 205–9

quality factor (Q-factor), 168, 170, 176, 180, 183, 185, 201, 202, 205, 241, 243, 253–4; diffractive, 32, 58, 68, 77, 87–9, 91, 168, 215, 253, 269, 273; ohmic, 58–9, 87–9, 91, 170, 269

quasi-optical gyrotron, 72, 268–70

radiation: coherent cyclotron, xiii–xiv; 8, 66, 76, 219, 270–6; Kirchhoff, 190

radiation line (line width), 9–10, 189–91, 200–204; natural, 200–202

radius: beam, 218, 275–6, 285; caustic (see caustic, radius); classical electron, 201; guiding center, 159, 274, 276, 279; gyroradius, Larmor, 6, 18, 25, 53, 125–6, 274, 278–9, 285, 289; waveguide, 220, 285

random process, 194, 200, 205

ray representation, propagation, 33, 222–5

recoil effect, 12, 165, 266; parameter, 144, 155–6

reflections, 140–1, 222, 225, 227–8, 252, 255, 258–9; anti-reflection coating, 228; coefficient, 141

reflector (mirror, quasi-optical, parabolic), 221–9, 268–9

refractive index, 13, 30, 120–1, 144

resistance, 51

resistive divider, 206

resonator, Fabry-Perot, 31. See also cavity

ridges, 280, 282

saturation: cross-saturation, 96–9; effects, 149, 151, 157–8, 177, 182; self-saturation, 96–9; speed, 100

scattering (collective, wave), 189

Schrodinger equation, 34

Schwinger lemma, 20, 294

selection: axial, 215; linear/ nonlinear, 92; mode, 66–8, 218, 272, 276

separatrix, 155, 285

sever, 255

signal, 189; direct injection, 110; drive/input, 110, 113, 167–70, 198, 202, 206; output, 140, 206

signal-to-noise ratio, 202

skin depth, layer, 58, 269, 297

slow-wave structure. See microwave, slow-wave

small-signal regime, 170, 172, 180, 241; gain (see gain, small signal); theory, 175, 208, 284

solenoids, xiv, 204, 209–11, 273; pulse, 41–2, 216; superconducting, 37–41, 191, 204

solid-state sources, phase arrays, 240, 256

space charge, 27–8, 84–7, 140, 165, 168, 199, 235, 284; limited current density (emission), 27, 108

spectroscopy, 269, 286

spectrum: density, 193, 195–6, 201, 204–5; line, 189, 191, 193–4; width, 193, 205

stability, 138–43; oscillations, 96, 117–8; phase, 191, 205–9; phase-locked oscillations, 111, 114; single-mode oscillations, 96, 100, 107–8; zero-drive, 113, 167

stagger-tuning, 135, 175–6, 180–2, 241, 265

starting (start) current, 65, 71, 94, 100, 104, 106, 108, 113, 175, 185, 216, 218, 249, 252, 255, 260–1

starting length, 284–5

start-up scenario, 103–10; tokamak start-up, 233

Stokes theorem, 297
suppression/mode suppression, 92, 94, 98, 103, 111
susceptibility, 50, 62, 93, 169–70, 173, 177–8, 184, 192–3, 196, 198, 200–201
tapering: magnetic field, 7, 63, 73, 75, 159, 174, 209, 251–2, 260; waveguide (up/down tapering), 23–5, 73, 81, 251–2, 260, 274
temperature, 229
tracking, 256
transit: angle, 7, 12, 50, 171, 177, 198, 206; time, 6, 66, 81, 193, 202, 206, 260, 279
trapping (electron), 155, 190, 199
traveling wave tube (TWT), linear-beam, xiii, 7, 37, 57, 106, 149–51, 160, 165, 199, 244, 255, 258
twystron, 37
voltage: depression, 28–9, 42–3, 84, 231, 235; high-voltage sources, 205; mod-anode, 106–7, 190–1, 197, 206, 265; ripples, 205
wave: backward (see backward wave); beam (linearly polarized wave beam), 220–9, 240; circularly polarized, 163, 275; cyclotron (fast and slow), 123–4, 138–9, 249, 251, 254, 256–7; cylindrical, 221, 224–5; envelope, 163–5, 259; equation, 164; fast, xiii, 13, 30, 138, 257, 272–3; forward (see forward wave); plane, 222, 228; plasma, 120, 151; positive and negative energy cyclotron, 123–4, 141–2; rotating (co- and counter-rotating), 162, 275, 284; slow, xiii, 13, 138, 273 (see also microwave); space charge, 121; transformation (transformers, quasi-optical), 220–5, 253; transverse-electric (TE-), 129, 131, 143, 162, 254–5, 279–80; transverse electromagnetic (TEM-), 274; transverse-magnetic (TM-), 129, 160, 162; traveling, 280
waveguide, 21, 23, 30–6, 133, 137, 140, 155, 183, 220–3, 249, 251–4, 258, 262, 267; aperture, 224; comparison, 34, 77, 90; confocal, 269; corrugated, 253–4; cylindrical, 146, 159, 222–3, 279, 305–7; input, 133–4, 157–60, 183; irregular, 30, 34–5, 77–8, 289; output, 24–5, 134, 157, 159–60, 220–2, 258, 265–7; oversized, 224; rectangular, 263; tapering (see tapering)

window, xiv, 227–30, 238, 286; atmospheric (see atmospheric window); Brewster, 228; dual, 233; CVD-diamond, 230, 233–7; night mot eye, 228
