Bacon, Francis, 15–18, 89; and deductive stage, 17; on development of knowledge, 15–16; and inductive stage, 16
‘Bad’: definition of, 74–75; significance of, 82
Belief: nature of, 79; and social cohesion, 82
Berlin, Isaiah, on science and philosophy, 97

C

Cause and effect, 32, 52
Certainty, 39
Cholera, beliefs respecting, 44–45
Conjecture, 19
Credibility, David Hume on, 51–52, 79, 92
Curie, Paul, 22
Custom, as censor of ideas, 50–51, 60
Darwin, Charles: on moral sense and social instinct, 76; and Alfred Russell Wallace, 67–68
Disapproval, moral, 80
Durkheim, Émile: on group belief and conduct, 79; on suicide, society, and morality, 79

Electron microscope, 25
Emotions, relation of, to inherent traits, 75–78, 80
Experience. See Understanding, and experience
Experimental method, 96

Fact, statements of, 6
Factual experience, as intellectual discipline, 64, 94
Factual observations: accidental, 22–26; generalization of, 29–33; and hypothesis formation, 24–25

Galileo, 25
Generalization, process of, 29–33
Generalizations, descriptive, approximate nature of, 35–37
Generalizations, explanatory: and causal relations, 32–33; degrees of development of, 39; scope of, 58; universality of, 42–43
‘Good’: definition of, 74–75; significance of, 81–82
Group belief, 76–77, 78

H

Habit, as censor of ideas, 50–51, 60
Herd instinct, 76–77, 78
Hume, David: on belief, 79; on cause and effect, 32;
on credibility, 51–52, 79, 92; on experience andunderstanding, 9–11; fallacy in argument of,
12–13; on imagination, 5; on inference from pastexperience, 10
Huxley, Thomas, 76
Hypothesis formation: process of, 61–65; relation of,
to observation, 24–27

I

Ideas, plausible and implausible, 50–51, 60
Imagination: and advancement of knowledge, 46–47,
59–60; censorship of, 50, 60
Implications, 31–32, 61–62
Induction: basis of, 60–61; Popper on, 18–20
Instinct, conscious manifestations of, 75–78
Intellect: function of, 89; programming of, 90–101
Intuition: explanation of, 65–66; Popper and, 18–21
