Acknowledgments

ONE NEVER HAS SUFFICIENT SPACE on an acknowledgments page to thank all of the individuals who have guided their career. First and foremost, I want to thank the extraordinary trainees and collaborators who have graced my professional life—our trainees often teach us more than we teach them, and without them, none of the research in this book would have been performed. My collaborators are based not only at Hopkins, but are spread all over the world, and they make the work fun and add fascinating layers to it. They are my mentors, my role models, and most importantly, my friends. Some who have been instrumental are mentioned in the book, but each one has contributed so much along the way.

Being a scientist is a demanding job and often takes time away from family. I’d like to dedicate this book to my incredible and supportive husband, Pat Morin, and my brilliant and amazing daughter, Alina. They always understand when I’m tied to my computer or on calls at inconvenient times, and when I am free, they’re always there to provide me with love and laughter. Pat even patiently read each page of this book and provided helpful comments.

I want to thank my immense support network—from my
patient and loving friends to my family: my mother, brother and sister, whom I mention in this book, and my wonderful niece Tara and nephew Sean, and their little families. Also my adopted family, the Sengamalays, who have been here all along when my parents and siblings were oceans away. Without their love and support I would be nowhere, and their love for me and pride in me gives me confidence when I need it most.

This book would not have happened without my coming to Johns Hopkins in the first place—for that I’d like to thank Denis Wirtz, who was beyond persistent and has been a staunch ally and supporter all the way. I’d also like to thank Arturo Casadevall and Dean Ellen Mackenzie, who opened my eyes to the immense possibilities at the Bloomberg School of Public Health, Bob Casero for orchestrating that connection, and Bill Nelson, Landon King, Liz Jaffee and others at the Cancer Center for partnering so closely with Ellen, Arturo, and Denis to recruit me here.

A huge thank you goes to Tim Wendel, author of *Cancer Crossings*, for his superlative writing skills. In the craziness of my day-to-day schedule, the weekly hours spent chatting with Tim were relaxing and fun. Also, Anna Marlis Burgard provided so much guidance, and her editing skills were critical in making this book easier to understand. Thanks also to Matt McAdam for his helpful comments and to the awesome Julie Messersmith in the Office of Research for supporting this series, and for all she does for us BDPs. And, thanks to
Barbara Kline Pope, publisher and director of Johns Hopkins University Press; this series is her brainchild.

I want to acknowledge the millions of patients and survivors of cancer worldwide, and the tireless patient advocates and foundation staff members who are instrumental in driving funding initiatives, and telling us, the basic scientists, what’s most important as we delve into the intricacies of this disease. Their passion fuels ours and makes our science stronger.
