"The editors have assembled some of the foremost experts on water and irrigation on the plains, and the result is an informative book—the most informative single volume we now have on this crucial resource, its past use, and its future supply."—Donald Worster, author of Dust Bowl: The Southern Plains in the 1930s and Nature’s Economy: A History of Ecological Ideas

"The book stands as an important contribution to the literature. It is packed with useful information and raises some significant questions for those concerned with the High Plains and groundwater resources."—Annals of the Association of American Geographers

"An excellent contribution to the literature ... does much to dispel the notion of uniform and rapid depletion of the High Plains aquifer."—Nebraska History

"This book is a valuable addition to a growing body of works on Western history exploring the relationship between humans and their environment."
—Journal of the West

David E. Kromm is professor emeritus of geography at Kansas State University. He is the author of World Regional Geography and numerous articles on water management.

Stephen E. White was professor of geography at Kansas State University. He published more than seventy-five book chapters and scholarly articles and, with Kromm, two widely distributed KSU reports, Conserving the Ogallala: What Next? and Conserving Water in the High Plains.

Gilbert F. White was the author or coauthor of more than two dozen books on flooding and water management, including Drawers of Water: Domestic Water Use in East Africa and Water for Life: Water Management and Environmental Policy.
