This book series aims to be an outlet for monographs or edited volumes addressing current problems and debates within Hispanic linguistics. The series will be open to a wide variety of areas and approaches, as long as they are grounded in theoretical goals and methodologies. Contributions from the disciplines of syntax, semantics, pragmatics, morphology, phonology, phonetics, etc. are welcome, as well as those analyzing interface issues or the historical development, acquisition, processing, and computation of grammatical properties. Research topics of interest are those dealing with Spanish or other Hispanic languages, in any of their dialects and varieties.

_Advances in the Analysis of Spanish Exclamatives_
Edited by Ignacio Bosque

_The Afro-Bolivian Spanish Determiner Phrase: A Microparametric Account_
Sandro Sessarego

_Interfaces and Domains of Quantification_
Javier Gutiérrez-Rexach
