Acknowledgements

The book is a collaboration between the authors together with Demet Dagdelen, Andrei Florian, Jamie Franklin, Chris Mead, and Daniel Luis dos Santos. Each contributor has undertaken small empirical projects and also written passages that have been reworked subsequently into this monograph. All the contributors participated in the course, Issue Mapping for Politics, offered in 2012 in the New Media International M.A. program at the University of Amsterdam. Among other things the purpose of the issue mapping course was to make contributions to the EU 7th Framework project, EMAPS (Electronic Maps to Assist Public Science), a collaboration between Sciences Po (Paris), the Digital Methods Initiative at the University of Amsterdam, DensityDesign Lab (Politecnico di Milano), the Young Foundation (London), Barcelona Media, and the University of Dortmund. EMAPS follows on from another EU 7th Framework project, MACOSPOL (Mapping Controversies in Science for Politics, 2009-2011), which led to the selection of the mapping approaches in this book: social cartography, risk cartography and critical neo-cartography using online mapping tools. Both EMAPS and MACOSPOL have had as their principal investigator Bruno Latour, and Tommaso Venturini was the scientist-in-charge for EMAPS. Additional work for the book was undertaken at the Ageing Places Issue Mapping workshop (Amsterdam, March 2012), where the European ageing resources map was conceived. The book’s contributors were joined at the workshop by the Amsterdam EMAPS team members, Liliana Bounegru, Erik Borra, Marieke van Dijk and Bernhard Rieder, together with Simeona Petkova, Anne Laurine Stadermann, and Ave Tampere. Much of the information design, and refined map-making, took place at the Issue Mapping Visualization Workshop (September 2012), with valued contributions by Alessandro Dondero, Stefania Guerra (who also created the cover art), Alex Piacentini, and Giacomo Traldi from the DensityDesign Lab. We also thank Sophie Waterloo for additional analysis on care drain and Michele Mauri for thoughtful explanations of the choice of one particular visualization type over another, not to mention the meticulous refinement of the graphics in this book. An earlier version of the work was presented in October 2012 at the Mapping Controversies Award, hosted by Bruno Latour at the La Novela Festival, Toulouse, France.
