# List of Figures, Tables and Boxes

## Figures

<table>
<thead>
<tr>
<th>Figure</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.1</td>
<td>The UN’s Sustainable Development Goal Framework</td>
</tr>
<tr>
<td>2.1</td>
<td>Causal mechanism describing primary and secondary effects of social origin</td>
</tr>
<tr>
<td>2.2</td>
<td>Distribution of cognitive ability test scores by socioeconomic status</td>
</tr>
<tr>
<td>2.3</td>
<td>Transition rates to higher levels of education by level of initial cognitive abilities</td>
</tr>
<tr>
<td>2.4</td>
<td>Probability to transit to upper primary school</td>
</tr>
<tr>
<td>2.5</td>
<td>Probability to transit to secondary school</td>
</tr>
<tr>
<td>2.6</td>
<td>Probability to transit to vocational/tertiary education</td>
</tr>
<tr>
<td>3.1</td>
<td>Latent class growth analysis observed and expected trajectories</td>
</tr>
<tr>
<td>3.2</td>
<td>Latent class growth analysis trajectories for the four-class model of cumulative life events, where the events included are sexual debut, pregnancy, leaving school and death of a parent</td>
</tr>
<tr>
<td>4.1</td>
<td>The relation between attribution of intention and probability of aggressing, by cultural group</td>
</tr>
<tr>
<td>4.2</td>
<td>Percentage of variance accounted for by between-culture, between-person within-culture, and residual effects for mother-reported variables</td>
</tr>
<tr>
<td>4.3</td>
<td>Model-implied slopes representing change in anxiety over three years at different levels of corporal punishment and maternal warmth</td>
</tr>
<tr>
<td>4.4</td>
<td>Framework for analyses examining longitudinal associations between a parent’s behaviour and a child’s behaviour across different cultural groups</td>
</tr>
</tbody>
</table>
5.1 Map of global early adolescent study settings
5.2 Global early adolescent longitudinal study research activities
6.1 The Global Early Adolescent Study conceptual framework
7.1 EuroCohort’s accelerated design and an example of a potential timeline
8.1 Past-year drinking and binge drinking in Joint Child Health Project offspring stratified by gender and age group
9.1 Growth of longitudinal research in peer-reviewed journal articles
9.2 The research dynamo for sustainable development impact

Tables

0.1 Unique added value of longitudinal research
2.1 Summary statistics: educational outcomes and individual variables
3.1 Risk ratio of log-binomial regressions of classes on HIV, unadjusted, adjusted for age at enrolment and length of enrolment and adjusted for these and other covariates including study arm
3.2 Frequency of attributes by class from the model of cumulative life events
3.3 Risk ratios of HIV and the cumulative life event trajectories illustrated in Figure 3.2 both unadjusted and adjusted for age at enrolment and length of enrolment
3.4 Dominance analysis of life events on risk of HIV infection
4.1 Highlights for policy makers and practitioners
6.1 Overview of RCT programmes evaluated by GAGE
8.1 Demographic characteristics and alcohol involvement percentages stratified by gender and age of offspring (13–24 years old)
8.2 Univariate predictors of current (past year) offspring alcohol use in total sample and stratified by gender
8.3 Parental predictors of current drinking stratified by offspring gender
8.4 Univariate predictors of current (past year) offspring binge use in total sample and stratified by gender 217
8.5 Parental predictors of current binge drinking stratified by offspring gender 220
9.1 Summary of selected foundations and agencies financing longitudinal research 239

**Boxes**

1.1 Margaret, Benin 30
1.2 Juliana, Brazil 34
1.3 Ly, Vietnam 37
6.1 Multidimensional changes during adolescence 137
6.2 Child marriage findings from GAGE Ethiopia 142
6.3 Contributing to the evidence base on adolescents with disabilities in Ethiopia 151
6.4 Threats facing adolescents in urban spaces: emerging findings from Bangladesh 152
6.5 Complexities of psychosocial needs among adolescents in humanitarian contexts 153
