List of Figures

1 PRINCIPLES OF PLASTIC SURGERY, WOUND HEALING, SKIN GRAFTS AND FLAPS

1.1. The skin with its separate layers and appendages. 6
1.2. The reconstructive ladder. 15
1.3. Simple interrupted sutures. 17
1.4. Simple continuous sutures. 17
1.5. Mattress sutures: horizontal (left) and vertical (right). 18
1.6. Subcuticular suture. 19
1.7. The skin grafting process. 20
1.8. Advancement flap. 26
1.9. Rotation flap. 27
1.10. Transposition flap. 27
1.11. Limberg flap. 28
1.12. Z-plasty. 28
1.13. Interpolation (Littler’s) flap. 29
1.14. Cormack and Lamberty classification. 33
1.15. Mathes and Nahai classification. 35

2 ABDOMINAL WALL RECONSTRUCTION

2.1. Anterior abdominal wall layers. 39
2.2. Blood supply to the anterior abdominal wall. 40
2.3. Abdominal vascular zones. 41
2.4. Component separation. 45
2.5. Mesh positioning. 46

## 6 BURN RECONSTRUCTIVE SURGERY

6.1. Consultation and assessment flow diagram. 124  
6.2. Timing of surgery and procedures. 126  
6.3. The reconstructive ladder for post-burn reconstruction. 127  
6.4. Guidelines for the reconstructive process. 128  
6.5. The stages to graft healing ‘take’. 130  
6.6. Factors affecting skin graft ‘take’. 131  
6.7. Full-thickness skin graft. 132  
6.8. Advantages and disadvantages of tissue expansion. 138  
6.9. Guidelines for successful tissue expansion. 139  
6.10. Advancement flap. 147  
6.11. Z-plasty technique. 148

## 7 SOFT TISSUE INJURIES OF THE HAND

7.1. Bones of the hand. 157  
7.2. Deep flexor compartment of the forearm. 158  
7.3. Extensor compartment of the forearm. 160  
7.4. Dorsal interossei. 161  
7.5. Palmar interossei. 162  
7.6. Arterial supply of hand. 163  
7.7. Diagram showing sensory innervation of the hand. 164  
7.8. Testing flexor digitorum profundus function. 167  
7.9. Testing flexor digitorum superficialis function. 167  
7.10. Testing extensor digitorum communis function. 167  
7.11. Structure of the tendon. 169  
7.12. Flexor pulley system. 170  
7.13. Flexor zones. 170  
7.14. Flexor tendon repair techniques. 171  
7.15. Diagrammatic representation of the extensor attachment in fingers. 173  
7.16. Extensor zones. 174  
7.17. Structure of the nerve. 176  
7.18. Diagrammatic representation of Seddon’s classification of nerve injury. 177  
7.19. Diagrammatic representation of the cross-section of an artery. 180  
7.20. **A.** Diagrammatic representation of the nail. **B.** Cross-section of the fingertip. 182  
7.22. Incision and drainage of paronychia. 185
8 LOWER LIMB TRAUMA AND RECONSTRUCTION

8.1. The Gustilo & Anderson classification of open tibial fractures. 194
8.2. The Mangled Extremity Severity Score (MESS). 195
8.3. Cross-sectional anatomy of lower limb and approach to four-compartment fasciotomy in compartment syndrome. 199

9 INJURIES OF THE FACIAL SKELETON

9.1. Illustration of frontal sinus anatomy. 214
9.2. Illustration of naso-orbitoethmoid fracture classification. 216
9.3. Illustration of Le Fort fractures. 217
9.4. Illustration of facial buttresses. 220
9.5. Illustration of mandibular fracture site frequency. 220
9.6. Illustrations of ‘The Horizontal Rule of Fifths’ and ‘The Vertical Rule of Thirds’. 225

10 CONGENITAL HAND ABNORMALITIES

10.1. Abbreviated Swanson’s classification of congenital hand abnormalities. 231
10.2. Radial longitudinal deficiency with ulnar bowing and thumb hypoplasia. 233
10.3. Soft tissue distractor for radial longitudinal deficiency. Marks indicate ulnocarpal alignment. 233
10.4. Ulnar longitudinal deficiency. 234
10.5. Type 2 cleft hand. 235
10.6. Type 4 thumb hypoplasia. 236
10.7. Simple, complete third web syndactyly with markings for interdigitating flaps. 238
10.8. Interdigitating flaps in syndactyly release. 238
10.9. Bilateral type 3 ulnar polydactyly. 240
10.10. Wassel type 4 thumb duplication. 241
10.11. Macrodactyly of middle and ring digits. 243
10.12. Symbrachydactyly managed by vascularised toe transfer. 244
10.13. Constriction ring syndrome. 245
11 EAR RECONSTRUCTION

11.1. Lateral surface of the external ear. 249
11.2. The main components of an elastic cartilage. 250
11.3. The therapeutic algorithm for partial ear reconstruction. 255

12 CRANIOFACIAL SURGERY: CRANIOSYNOSTOSIS SYNDROMES AND CLEFT LIP AND PALATE

12.1. Lateral view of skull anatomy. 265
12.2. Illustration of the main skull sutures (superior view). 265
12.3. A. A unilateral left-sided CL/P deformity in a neonate. B. A bilateral CL/P defect present in a newborn. 266
12.4. Facial characteristics associated with Apert syndrome. 268
12.5. A. Le Fort osteotomy I–III. B. Monobloc osteotomy with fronto-orbital advancement. 271
12.6. LAHSHAL classification. 273
12.7. Summary of craniosynostosis syndromes and CL/P. 277

13 GENITAL RECONSTRUCTION

13.1. Urogenital system at 6 weeks. 281
13.2. Androgen synthesis. 284
13.3. Foetal Leydig cell metabolism. 284
13.4. Neurovascular sparing clitoroplasty for clitoromegaly and corporal tissue excision. 287
13.5. Vecchietti procedure. 288
13.6. Hypospadiac penis 290
13.7. Cryptorchidism testicular positions. 293
13.8. Appearance of bladder extrophy. 295
13.9. Penile anatomy and layers. 299
13.10. Singapore fasciocutaneous flaps. 305
13.11. Gracilis myocutaneous flap boundaries. 305

14 VASCULAR ANOMALIES

14.1. A. and B. Ulcerated infantile haemangiomas on the upper lip (A) and neck (B). 316
14.2. A., B., C. and D. A case of infantile haemangioma after treatment by propranolol from 6–9 months of age. 317
14.3. Two cases of rapid involuting congenital haemangioma at different locations. 318
14.4. Pyogenic granuloma of the left cheek. 319
14.5. Three successive stages in the evolution of a kaposiform haemangioendothelioma treated by a combination of acetylsalicylate, vincristine and ticlopidine. 320
14.6. A patient with Sturge–Weber syndrome. 323
14.7. Venous malformation of the right arm. 324
14.8. A. and B. Two cases of lymphatic malformations, respectively involving the neck and tongue. 325
14.9. Arteriovenous malformation of the right buttock. 326

15 LIPOSUCTION

15.1. Common areas of liposuction on the trunk. 335
15.2. Common areas of liposuction on the upper and lower limbs. 335
15.3. Water-assisted liposuction. 339
15.4. Zones of adherence. 340
15.5. Mercedes type cannula (three holes). 341

16 FACIAL AESTHETIC SURGERY

16.1. Soft tissue layers of the face. 347
16.2. Features of the ageing face. 351
16.3. Surface anatomy of the eyelid. 358
16.4. Cross-section of the upper eyelid. 358
16.5. Blepharoplasty approaches on the lower eyelid. 361
16.6. Alignment of the eyebrow. 362
16.7. Topography and anatomy of the nose. 366

17 BLEPHAROPLASTY – SPECIAL FOCUS ON ASIAN BLEPHAROPLASTY

17.1. Variations of Asian upper eyelids. 376
17.2. The anatomical differences between Asian and Caucasian eyelids. 377
17.3. Suture ligation technique. 379
17.4. Surgical resection technique. 381
17.5. A. and B. Sagittal view of the surgical resection technique. 381
17.6. A. to F. Epicanthoplasty Z-plasty designs. 383
18 AESTHETIC BREAST SURGERY

18.1. Mammary ridge (milk line) running from the anterior axillary line through the nipple to the pubic tubercle. 388
18.2. Tanner stages of breast development. 388
18.3. Surface anatomy of the female breast. 389
18.4. Blood supply to the breast. 389
18.5. Components of a breast implant. 390
18.6. Shapes of breast implants. 391
18.7. Dimensions of an implant. 391
18.8. Profiles of breast implants. 392
18.9. Pre-operative measures. 394
18.10. Pinch test. 395
18.11. Anterior pull skin stretch. 395
18.12. Soft tissue pinch test at the inframammary fold. 395
18.13. Lassus vertical scar mastopexy. 400
18.14. Lejour vertical scar mastopexy. 401
18.15. Hammond vertical scar mastopexy. 401
18.16. Skin pattern for inverted-T mastopexy. 402

19 BODY CONTOURING

19.1. Cannula 1, a standard single-slot cannula. Cannula 2, a two-slot cannula. 413
19.2. The two subcutaneous adipose tissue layers: superficial and deep. 413
19.3. Skin indentation as a result of liposuction overcorrection. 414
19.4. Before and after image of mini abdominoplasty. 417
19.5. Illustration of the mini abdominoplasty procedure once plication of the rectus muscle fascia is completed. 417
19.6. Pre-operative marking for a full abdominoplasty. 419
19.7. Full abdominoplasty: the technique. 420
19.8. Circumferential body lift markings. 422
19.9. Circumferential body lift markings in the posterior view, illustrating an estimation of the final scar’s position above the gluteal crease. 423
19.10. Massive weight loss patients usually present with excessive loose skin in the upper arm as well as other areas. 424
19.11. Pre-operative upper arm skin markings. 425
19.12. Thigh lift. Appearance of the medial thigh, A. before and B. after the procedure. 427
## 20 THE EVOLUTION OF HAIR TRANSPLANT SURGERY

20.1. The human hair follicle: structure of the shaft. 432
20.2. Embryology of hair. 433
20.3. The human hair growth cycle. 434
20.5. A. Punch tool inserted. B. Hair removed with forceps. C. Hairs placed in Petri dishes and kept hydrated. 440
20.6. Dissection of the donor strip. 441
20.7. The trichophytic method of wound closure. 441
20.8. Insertion of grafts with forceps. 443
