'No other work as cohesively, clearly, forcefully and successfully argues for the Web’s centrality in contemporary society and social science. While scholars of new media tend to turn their attention to the newest and latest new media phenomena, the Web is and will continue to be crucial to understanding online phenomena generally and, just as critically, providing a record of online discourse and events.'

– Steve Jones, UIC Distinguished Professor of Communication, University of Illinois at Chicago

The World Wide Web has now been in use for more than 20 years. From early browsers to today’s principal source of information, entertainment and much else, the Web is an integral part of our daily lives, to the extent that some people believe ‘if it’s not online, it doesn’t exist’. While this statement is not entirely true, it is becoming increasingly accurate, and reflects the Web’s role as an indispensable treasure trove. It is curious, therefore, that historians and social scientists have thus far made little use of the Web to investigate historical patterns of culture and society, despite making good use of letters, novels, newspapers, radio and television programmes, and other pre-digital artefacts. This volume argues that now is the time to ask what we have learnt from the Web so far. The 12 chapters explore this topic from a number of interdisciplinary angles – through histories of national web spaces and case studies of different government and media domains – as well as an introduction that provides an overview of this exciting new area of research.

Niels Brügger is Professor and Head of the Centre for Internet Studies and of the Internet research infrastructure NetLab, Aarhus University.

Ralph Schroeder is Professor and Director of the Master’s course in Social Science of the Internet at the Oxford Internet Institute, University of Oxford.
