Acknowledgements

So many people have been involved in this project and I want to thank them all and fully acknowledge their individual contributions. Firstly I am deeply indebted to the members of the excavation team who took part over some or all of the four years: Wayne Bennett, Henry Broughton, Jill Cobley, Paolo Favero, Davina and Paul Freedman, Shisachila Imchen, Andy Jones, Titika Malkogegour, Jenny Moon, Jan Oke, Clarissa Sanfelice Rahmeier, Thais Rocha da Silva, Mike Rowlands, Louisa Sherman, Lesley Strong, Priscilla Trenchard and David Wengrow.

Andy Jones, assisted by Davina Freedman and Karolina Pauknerová, directed the excavations at Tor Cairn in 2008–9. The excavations in 2010 at Little Tor Cairn and at Twin Cairn A in 2011 were directed by Karolina Pauknerová and Chris Tilley. The excavations on Aylesbeare Common military structures and the pebble platforms took place in September 2009 and September 2010. Andy Jones directed the excavations of the military structures during 2009 and in 2010 the excavations of these and the pebble platforms were directed by Tilley and Pauknerová. Excavations at Jacob’s Well and at the Colaton Raleigh enclosure that took place in 2010 and 2011 were also directed by Tilley and Pauknerová.

All the various pebble analyses were conducted by Chris Tilley and Clarissa Sanfelice Rahmeier. Pebbles from the natural test samples were all recorded by Chris Tilley, assisted at various times by Kate Cameron-Daum, Jan Oke and Juan Rojas Meyer.

I am indebted to Mike Allen, R.Y. Banerjea, Dana Challinor, Simon Hillson, Lenka Lisá, Vladimír Machovič, Richard Macphail, Antonín Majer, Petr Pokorný, Rob Scaife, Roger Taylor, Keith Wilkinson and Jiří Woitsch for their specialist reports and advice that are only briefly summarized in the text but are published in individual site reports in the on-line appendices to this book. Keith Wilkinson took the environmental samples at Jacob’s Well and on Aylesbeare Common and in the bog at Longo Bottom. At Tor Cairn they were taken by Mike Allen and at other sites by Karolina Pauknerová.
I am grateful to Jane Russell for finds drawings. Mark Roberts, assisted by L. Peyre, conducted a geophysical survey of the Colaton Raleigh enclosure. Toby Taylor of the RSPB swaled an area adjacent to the topsoil scrape on Aylesbeare Common preceding the excavations in 2009, permitting a ground walking survey. He also located the position of three previously discovered pebble platforms for us in 2010. Hazel Riley (English Heritage) conducted a GPS survey of the Aylesbeare Common summit area.

A huge thanks to Jan Oke for her help with field survey over the years in all seasons and weathers. Karolina Pauknerová has been an invaluable and tireless source of support during the excavations, in writing up the results, drawing the diagrams and generally making sense of it all. She also organized all the environmental analyses undertaken in Prague and crucially, through her expertise, recognized the presence of the tar layer at Jacob’s Well that might so easily have been missed. She also undertook some of the burning experiments with pebble samples.

I am particularly indebted to Jan Oke and Lesley Strong for carrying out the laborious work of planning the Aylesbeare double-axe and ox-hide pebble platforms, and to Jan together with Karolina Pauknerová for the trapezoidal platform. Clarissa Sanfelice Rahmeier undertook the massive task of transferring pebble data from Tor Cairn and Little Tor Cairn site notebooks to Excel spreadsheets for the quantitative analyses. Clive Orton advised on the appropriate tests. I recorded all the pebbles from Twin Cairn A, the sections through the Aylesbeare pebble platforms, analysed and counted the ‘special’ pebbles and quantified the pebble classes from all the sites. Clarissa conducted the ‘special’ pebble tests and colour tests among staff and students in the Department of Anthropology, University College London and with members of the excavation team. I undertook the interviews with people with pebble structures in their gardens, with advice on which to choose being given by Jill Cobley, who created the pebble archive of all such structures in the area. I am most grateful to all those people I interviewed for so enthusiastically discussing their pebbles with me.

Benjamin Tilley created a wonderful project website. Jill Cobley transcribed the quotations from Hutchinson’s diary, Jon Hanna kindly took me up in his light aircraft with Wayne Bennett in order to take aerial photographs. Base maps for the artefact and site distributions were drawn by Wayne Bennett, who also drew Figures 1.1, 6.9 and 10.1. All the other line diagrams were drawn by Karolina Pauknerová.

Mike Rowlands and Charles Stewart kindly read a draft version of the introduction and conclusions to the book and provided very
useful comments that have been invaluable to improving the arguments. Two anonymous reviewers commented on sample chapters of the manuscript and one of these provided further extensive comments on a draft version of the entire text. I am most grateful for the comments received, which have led to a series of invaluable revisions of parts of it.

I am very grateful to the Devon Archaeological Society for the loan of some surveying and excavation equipment. Bill Horner, Frances Griffith and Cressida Whitton (Devon County Council: Historic Environment) gave much support and advice. Bungy Williams (Commons Warden) undertook machine cutting of the vegetation around Tor Cairn and Little Tor Cairn prior to the excavations and transported numerous bags of pebble and environmental samples on and off site for analysis in his Land Rover over the years. He also kindly drove Priscilla Hull all the way to Tor Cairn so that she could experience the excavations herself.

Many thanks to Jim Cobley for advertising the excavations and guiding visitors to the various sites over the years, and making arrangements to drive Priscilla safely to Jacob’s Well, a difficult journey down a very steep hill slope to the very edge of the bog. George Perrott (Clinton Devon Farms Manager) kindly cut a crop of clover ley prior to excavation at the enclosure site. Paul Irish expertly removed and replaced the topsoil.

I thank Tom Sunderland and Natural England for a derogation order allowing the work to take place in an SSSI and SPA over the years, and am very grateful to Clinton Devon Estates for permission to excavate on their land. Many thanks to Christopher Feeney for his expertise in copy-editing, Sarah Rendell at OOH for her help during the production of the book and Chris Penfold and Jaimee Biggins at UCL Press for their support and advice.

Funding permitting the radiocarbon dating and specialist reports was kindly given by the late Mrs Priscilla Hull, Richard, John and Elizabeth Carter, and a series of small grants from the Devon County Council Historic Environment Department.

Last, but certainly not least, I am immensely grateful to my late wife Karin and to Alice and Benjamin Tilley for so cheerfully welcoming guests into our home, which on an annual basis became transformed into a dormitory. When I knew in late 2011 that Karin had terminal cancer at the age of 54 I was so shocked that it was impossible to do anything. Only a few weeks before her death Karin told me that I must finish the project and ensure that it was published. I have followed her advice, always the wisest.
