We are delighted to express our appreciation to the long list of people and institutions who have made this edition possible and encouraged us in pursuing it. Foremost are our colleagues and teachers, without whose early and ongoing advice and support we could neither have begun nor completed this project: the late Eric Stanley (with particular thanks for introductions to the Bodleian Library, Oxford hospitality, and bringing two of his students from different sides of the Atlantic together); Linda Voigts, George Keiser, Monica Green, and Peter Jones for their indispensable contributions to our understanding of the history of medicine, especially in England; the late A.G. Rigg for many years of help with Daniel’s Latin and Greek sources; Ralph Hanna and Tony Edwards for their helpfully astringent advice at the beginning of the project and Laurence Moulinier-Brogi for her advice near its end; Jake Walsh Morrissey and especially Faith Wallis for their special contributions in relation to Daniel’s beta text, herbal knowledge, astronomical and calendric interests, and more esoteric sources. We also gratefully acknowledge the help of colleagues on the MEDMED-L listserv, founded and maintained by Monica Green, in solving some of the knottier puzzles posed by Daniel’s authority-citations, and an anonymous reader for University of Toronto Press for suggestions on linguistic aspects of the edition. Errors that remain are our own.

The general editors are also very grateful to the research team of graduate students at the University of Toronto: Lara Howerton, Shirley Kinney, Nora Thorburn, and Elise Williams, led by Sarah Star, Jessica Henderson, and C.E.M. Henderson. Working on a completely volunteer basis for over two years, the team made a full transcript of the base manuscript, tracked down many of Daniel’s cited sources, and drafted thousands of potential glossary entries. Without their enthusiastic contributions, the project would never have stayed on track or reached completion. Of particular importance has been C.E.M. Henderson’s work on the website for the ongoing Henry Daniel Project (https://henrydaniel.utoronto.ca)
and paleographic expertise; Jessica Henderson’s codicological and digital photographic work on several of the manuscripts collated for the edition; and Sarah Star’s logistical leadership, extensive work on variants and draft glossary entries, and final-stage proofreading and other editorial tasks.

No scholarly project whose sources are as diverse and far-flung as those associated with the *Liber Uricrisiarum* could succeed without the aid of librarians and their libraries. Our debts in this arena are many, beginning with our home institutions: the staff of University of Toronto Libraries; and Agnes Widder, Peter Berg, Patrick Olson, and the Interlibrary Loan staff at the Michigan State University Library, who have willingly and successfully tackled challenging problems in locating and providing rare or early texts.

We are also pleased to thank the ever-helpful staffs of the libraries that hold copies of the *Liber Uricrisiarum* and other uroscopic texts, both for access to the manuscripts and for providing images of manuscripts or permitting digital photography thereof: the British Library; the Bodleian Library; the Wellcome Library for the History and Understanding of Medicine (with special thanks to Elma Brenner for alerting us to the completed digitization of Wellcome MS 225); Cambridge University Library (and thanks to Suzanne Paul for assistance there); Gonville and Caius College Library (where Mark Statham has been a supporter of work on Middle English medical manuscripts for many years); Magdalene College Library (and particularly Catherine Sutherland in the Pepys Library); the libraries and librarians of St John’s College and Trinity College, Cambridge, and of Merton College, Corpus Christi College, and Pembroke College, Oxford; the Royal College of Physicians Library in London; Glasgow University Library; the Massachusetts Historical Society Library; the Henry E. Huntington Library; and, for microfilm access to manuscripts of IsaacIsraeli’s *De urinis* and *De pulsibus*, as well as various commentaries on Giles of Corbeil, the Vatican Film Library at St Louis University (with special thanks to Susan L’Engle). We owe a particular debt to the late Chris Jeens, Librarian and Archivist of the Gloucester Cathedral Library, who personally supervised the digital imaging of the Gloucester manuscript by two generous Cathedral volunteers, and to his successor Rebecca Phillips.

For permission to publish text and reproduce images from British Library, Royal MS 17 D.i (ff. 6r, 18v, 49v, 51r, and 51*/52), we are grateful to the British Library Board. We are likewise pleased to acknowledge the Bodleian Library, University of Oxford, for permission to publish text from Bodleian Library, e Musaeo MS 187. Our use of Gloucester Cathedral’s MS 19 in the textual apparatus is by permission of the Chapter of Gloucester Cathedral.
We are further indebted to the Centre for Medieval Studies at the University of Toronto and its Director, Suzanne Conklin Akbari, Associate Director (2016–18) Nicholas Everett, and Graduate Administrator Grace Desa for institutional and personal support of the Henry Daniel Project and for a publication subsidy for this edition; to the Pontifical Institute of Mediaeval Studies and the Editor-in-Chief of its Department of Publications, Fred R. Unwalla, for sponsoring the 52nd Annual Conference on Editorial Problems in 2017, which focused on issues in editing Henry Daniel and other English and Latin medical writers; and to the Social Sciences and Humanities Research Council of Canada for an Insight Development Grant in support of the ongoing Henry Daniel Project (2017–20). The Huntington Library provided Sarah Star and Jessica Henderson with Huntington Fellowships in 2015 and 2016 to consult HM 505; Henderson’s work on several Daniel manuscripts in England was supported by a 2015 Mellon Foundation grant. Professor Alexandra Gillespie at the University of Toronto has given invaluable advice on matters paleographic, as well as providing space in the “lab” of her Old Books New Science Project, where members of the research team could work on manuscript transcriptions. The staff at University of Toronto Press, especially Suzanne Rancourt and Barb Porter, have made the production of this large and complicated book a smooth and pleasant process; it has also been a delight to work with Judy Williams, the book’s copy editor.

Finally, we express deepest personal thanks to our families, friends, and mentors for their interest and unfailing support: Ruth Harvey to Dr Timothy C. Harvey and the late Mrs Mary Stanley, for many medical conversations over the years, and to Professor Stephanie Hollis for her generous invitation to talk about Giles of Corbeil in New Zealand; Tess Tavormina to the late Lister Matheson and to Professor Linda Voigts, both of whom put her on the trail of vernacular scientific and medical writing; Sarah Star to Jeff Espie, for listening to it all; Jess Henderson to her parents, Jon and Margaret Henderson, for their endless and unwavering support; and C.E.M. Henderson to Professors Linne R. Mooney and Alexandra Gillespie for their advice and encouragement.
